

## Important things to note

- KEYS

You will be given three sets of keys. 2 sets of keys with 2 keys. They are for the main door of the windmill and for the utility outhouse directly opposite the main door. The generator, washing machine, water pump and solar power controls are in here. To unlock the front door you may have to turn the key twice to open the lock also the front door may need a tug towards you as you turn the key.

If you lose or fail to return keys the locks will be replaced and we will request that you pay for their replacement (€90.00).

- **The water from kitchen sink waters the garden, (as do the bath, shower and sink in the bathroom) so please do not allow food waste or fat/oil to go down the plug hole.**

To get rid of waste oil/fat there are some large empty tin cans under the sink, putting kitchen paper in these will absorb the oil then the contents can be thrown away with the general rubbish. Please keep the cans for future use.

- **Please don't put toilet paper, sanitary towels etc down the toilet. We have a traditional 'French drain' which can handle human waste with aplomb but paper etc could cause expensive problems and a nasty smell so please use the bin provided and empty it when taking rubbish out.**

- The coolest bedroom is the one next to the kitchen.
- Use an oven glove when handling the kettle. It gets hot.
- Be aware of the heat; don't let the lovely breeze fool you! It gets very hot and will burn so keep a high sun factor sunscreen to hand.
- Rubbish. Please take your rubbish to the green bin by the road or at the crossroads (or any roadside green bin). There are also re-cycling bins for paper, plastic and glass outside the sports bar in Santa Luzia.
- Dialling code for England is 0044 (+44) and don't use the nought of the local English dialling code. For example 020 7226 9322 becomes 0044 20 7226 9322.
- Gas for the cooker and water heating is bottled. If you run out of gas switch bottles, then please either text or phone Louise as she'll sort out a replacement backup bottle for you.
- Candle light is romantic and doesn't use electricity but don't be too afraid of the solar power. Only using lots of water, the hairdryer or other high energy items will make it struggle. If power goes grab a torch and turn on the generator for half an hour or so until SOC is 70%+. To start the Generator just press the start button. Don't use the key.
- Please leave the place as you found it.

Thanks
