

## The swimming pool

The swimming pool is a bio-pool. It is environmentally friendly, chemical free and biologically filtered.

The pool's solar powered filter system was designed by Daniel Lloyd-Morgan *swimnatural.com* Daniel designed the first bio-pool in the UK which won the prestigious Gold Medal at the Hampton Court Flower Show.

The pool is in effect a lake with a carefully balanced ecosystem so be gentle with it. You'll find harmless water boatmen and other living things in the pool, they are all part of what makes the pool work.

### To take care of the pool:

The water level of the pool is critical. Ideally it wants to be at the half way point of the skimmer outlet (white rectangular hole in the swimming area) and it is critical if it gets to the top of the higher inner wall. When the water level is low please add water by turning the little orange tap just outside the front door marked 'pool' on is when the orange tap is in line with the direction of flow.

The best times to add water to the pool are between 11:00 and 14:00 as the sun is high and the solar power is strongest for the bore hole pump. Please don't fill the pool for more than an hour a day.

- **Please do not allow pets into the pool.**
- **Please do not walk in, or use the pool's planted shallow areas.**

Water here is a scarce resource, please use it sparingly.

Thank you.
